

lkarus::operator+=

lkarus::operator-=

lkarus::correctionSize

```
graph LR; A[lkarus::operator+=] --> C[lkarus::correctionSize]; B[lkarus::operator-=] --> C; C --> C;
```

The diagram illustrates a control flow or state transition. On the left, two rectangular boxes are stacked vertically. The top box contains the text 'lkarus::operator+=', and the bottom box contains 'lkarus::operator-='. Arrows from the right side of both boxes point towards a single rectangular box on the right. This box has a light gray fill and a black border, and it contains the text 'lkarus::correctionSize'. A curved arrow originates from the top-right corner of the 'lkarus::correctionSize' box and loops back to its top-left corner, indicating a self-loop or a recursive call.
